What is TRIZ?

A way of thinking

A family of tools, tool kits, and software

The “way of thinking” can ALWAYS be used, but the tools in the tool kit can be selected depending the nature of the problem

Types of Problems

Harmful effect elimination

It is necessary to eliminate this harmful effect with minimal changes in the system

Cost decreasing

- High waste rate
- Unjustified costs related to the features of the system
- Unjustified costs related to the technological process

New application

- Increase product functionality
- Increase sales market

New product

- Production process problems
- Patent Circumventing

Fundamentally New product

- Determine the most promising operational principles
- Provide possible problems during its production and use

Harmful effect elimination

Cause-Effect Analysis

Value Analysis

Inventive Principles

Su-field Analysis

ARIZ

Analysis According to the Evolution Patterns

Production Cost Decreasing

Value Analysis

Trimming

Cause-Effect Analysis

Inversion Approach

Value Analysis of Technological Processes

Trimming for Technological Processes

New Product Application

Value Analysis

Analysis According to the Evolution

S-curve Analysis

Preparation of New Product

Cause-Effect Analysis

Su-Field Analysis

Value Analysis

Analysis According to the Evolution Patterns

S-curve Analysis

Creation a Fundamentally New Product

Cause-Effect Analysis

Inversion Approach

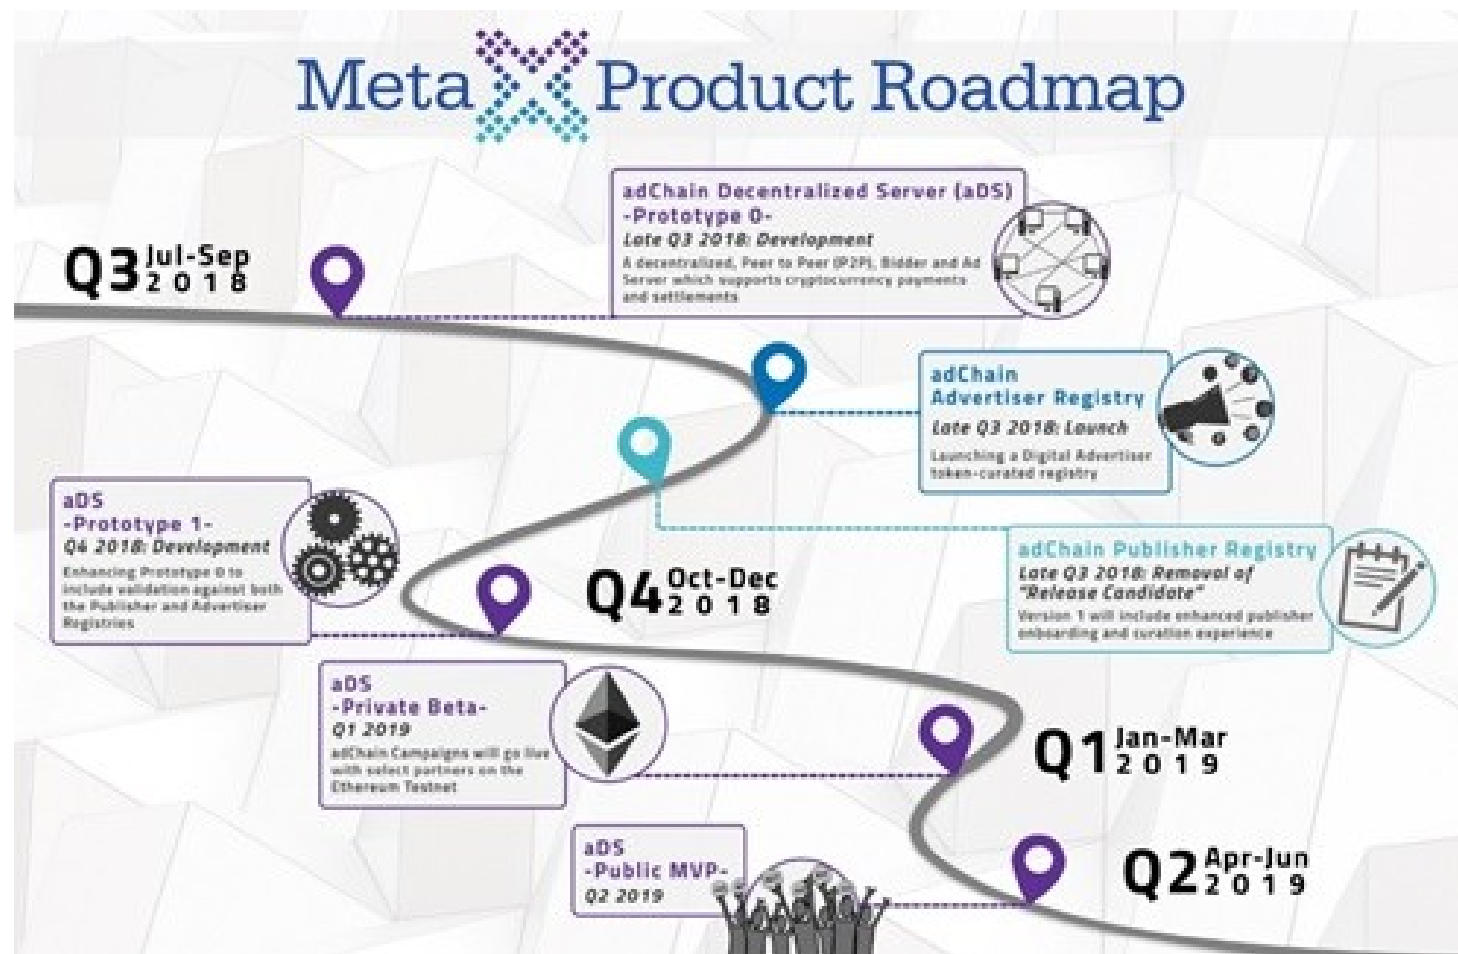

Analysis According to the Evolution Patterns

S-curve Analysis

What is Roadmap

Roadmap: Direction of Use

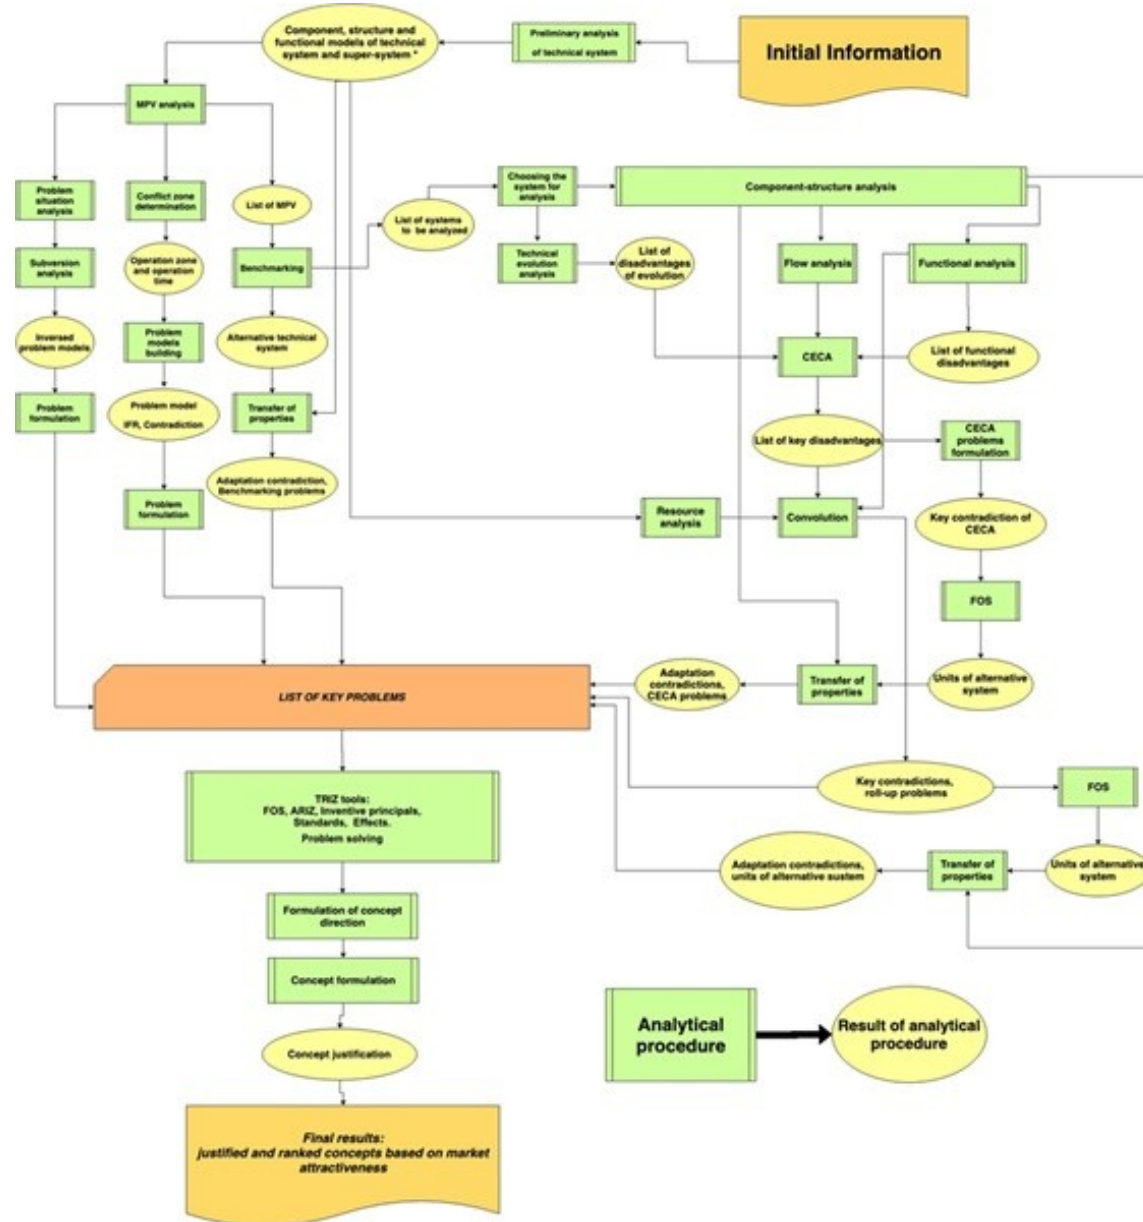

Roadmap: Application Areas

Key Elements of the Classical Approach to a Roadmap

Roadmap with TRIZ Tools

Conclusions

TRIZ methods and tools can be used effectively for developing Roadmaps in all consulting activities. Positive conclusions made by the clients after the consulting completion:

1. The "Roadmap" created with the use of the gained knowledge has strict logic, and communications between stages are logical and clear, and influence of subjective factors is generally eliminated;
2. TRIZ tools which were used for "Roadmap" creation are very practical and effective, including Function Analysis, Cause-Effect Chain Analysis, Function-oriented Search and the Laws of Technical System Evolution (Evolution patterns);
3. Application of the updated Roadmaps helped to reveal shortcomings of initial technical planning of divisions, the insufficient analysis and use of new technologies as well as a lack of cross- and multi-disciplinary cooperation;
4. The updated Roadmap helps new employees to understand quickly the history and current state of company activities;
5. The combination of the updated "Roadmap" and evolution trees and patterns will play an important role in innovation projects.

About Us

Kirill Domkin, TRIZ developer, PhD

Georgy Severinets, TRIZ master

Oleg Gerasimov, TRIZ master, PhD
